BCI (brain computer interface)

Basically controlling any computer or a system with your brain

For example a person who is paralyzed

Can use a bci that would move his wheel chair without using his hands

What is BCI

How does it work

Why BCI is the future

Where is it currently used

What does paper 1 discuss

It tells the past

Present

And future of the BCI

Get into the details of paper 1

What does paper 2 discuss

Discusses how this needs to a study and
Reasrch should involve more people

Get into details of paper 2

Then we discuss about the scope of this
BCI

Then we discuss what would be the
disadvantages of these bci

Bci with ai(interesting)

Then conclusion
